

Angled Twin Chucks

[Product Options](#) | [Related Products](#)

There are two types of connector. It is therefore important when purchasing connectors to specify whether a closed or open end type is required.

A **Closed End** connector is used when air is supplied directly from a an air line (i.e. compressor or air receiver). A non-return valve unseats on connection to the tire's valve allowing air to flow into the tire.

An **Open End** connector has a pin which unseats the tire's valve when is use. For use with inflators and cannot be used on the end of an air line.

Product Options

Part No.	Valve Style	Inlet size
CO1A13	Open end	1/4" NPT
CO1B13	Closed end	1/4" NPT
